INTRODUCTION

To illustrate agricultural facts and relationships the Bureau of Agricultural Economics prepares maps, charts, and diagrams. Many of these are published periodically; others are used in research work and are rarely published. Still others are prepared for lecture use by Bureau and Extension workers in connection with the Agricultural Outlook project.

Since many requests are received by the Bureau for copies of charts and maps, this list of about 2,600 illustrations has been prepared. Copies of the illustrations are useful in connection with study, teaching, text book plates, agricultural program planning, and lectures. These cannot be supplied free but they are available to individuals and institutions at a nominal cost as indicated.

It is not unusual to have two charts made that differ only in the yearly period selected, such as a crop year versus the calendar year. In such cases both charts are listed because each was made for a definite purpose.

Sample reproductions of the different types of illustrations listed will be found on the following two pages. These samples were made from the regular $8 \times 10\frac{1}{2}$ -inch photographs of the drawings.
